

is not being claimed in any of the following claims. It is the signal sent to or received by the listing party's computer or the querying party's computer that is claimed, not the computers themselves. As to claims that recited a signal being received by a given computer, a signal that is not received by said given component falls outside the scope of the claim. The
5 computer *itself* however does not form an element of the claim. Rather, receipt or generation of the signal by a computer is meant to be a limitation on the element of that particular signal. In claims where signals are received or generated by computers having web browsers and modems, it is only the signal the signal that is claimed, and not the computer having a web browser and modem.

10 Thus, as to a "querying signal generated by a querying party," it is the querying signal *itself* and not the querying party that is claimed. The "querying party" is recited to indicate the source of the signal. The limitation "generated by a querying party" serves to show that the element of a "querying signal" is limited to those querying signals that are in some way generated by a querying party. A "querying signal" not in some way generated by a querying
15 party would fall outside the scope of the claim.

Also, as to the term "a query notification signal that notifies the listing party," the query notification is claimed but not the listing party. The "listing party" is present in the claim language to state where the query notification signal is directed. The limitation of "that notifies the listing party" is included to show that only those query notification signals
20 capable of notifying the listing party fall within the scope of the claim language. However, the "listing party" is not claimed as an element itself.

Likewise, as to "a personal contact information signal generated by the bridge web site server sent to the querying party," the "personal contact information signal generated by the bridge web site" is claimed, not the querying party. However, "a personal contact

information signal generated by the bridge web site server” that is not somehow directly or indirectly sent to the querying party would not fall within the scope of the claims.

Likewise, as to the “consent/no consent signal from the listing party” the purpose of the recitation of the “listing party” is to indicate the source of the consent/no consent signal,
5 not to claim the listing party themselves.

The term “computer” used in the claims means any electrical or electronic device or combination of electrical or electronic devices that receives, processes, and presents data.

The term “comprising” in the following claims means to be made up of the recited elements and limitations and is intended to read-on devices or methods that contain all the
10 elements and limitations, regardless as to whether the device or method contains additional elements or limitations not specifically claimed. Except for claims 129 and 130, none of the following claims invokes paragraph 6 of 35 U.S.C. § 112 so as to be interpreted as being in means-plus-function or step-plus-function format.

I claim:

5 1. A web-based personal contact information system comprising:

a bridge web site server located on the Internet; said bridge web site server comprising
any computer, sub-component of a computer, or group of computers, or any combination
thereof, that possesses the capacity of maintaining a client/server environment on the
10 Internet;

said bridge web site server having a personal contact information directory database that
is capable of storing personal contact information of a listing party;

15 said bridge web site server receiving a querying signal generated by a querying party; said
querying signal comprising one or more signals sent in any sequence or simultaneously
from the querying party that embodies both a request for the personal contact information
of the listing party and also embodies a communication of identifying information about
the querying party, regardless as to whether the querying signal is modified or altered
20 along its path from the querying party to the bridge web site server;

said bridge web site server having a registration facility; said registration facility
comprising a device capable of receiving the querying party's personal contact
information embodied in the querying signal, storing the querying party's personal
25 contact information, and transmitting it to the listing party;

said bridge web site server generating a query notification signal that notifies the listing party that there has been a query for the personal contact information of the listing party; said query notification signal notifying the listing party of the communication of identifying information of the listing party; said query notification signal comprising one or more signals sent in any sequence or simultaneously to the listing party that embodies both a request for the personal contact information of the listing party and also embodies a communication of identifying information about the querying party, regardless as to whether the querying notification signal is modified or altered along its path to the listing party.

2. The web-based personal contact information system of claim 1 further comprising said bridge web site server receiving a consent/no consent signal from the listing party; said consent/no consent signal directing the bridge web site server as to what, if any, information stored in the personal contact information directory database is to be sent to the querying party; said consent/no consent signal comprising one or more signals sent in any sequence or simultaneously from the listing party to the bridge web site server that embodies an instruction as to what personal contact information, if any, is to be sent to the querying party, regardless as to whether the consent/no consent signal is modified or altered along its path from the listing party to the bridge web site server.

3. The web-based personal contact information system of claim 3 further comprising a personal contact information signal generated by the bridge web site server sent to the querying party; said personal contact information signal containing the personal

contact information of the listing party that was directed to be sent to the querying party according to dictates of the consent/no consent signal generated by the listing party; said personal contact information signal comprising one or more signals sent in any sequence or simultaneously, to the querying party that embodies the personal contact information that is to be sent to the querying party, regardless as to whether the personal contact information signal is modified or altered along its path from the listing party to the bridge web site server.

4. The web-based personal contact information system of claim 3 wherein the bridge web site server is capable of generating a bridge web site that may be accessed by the querying party.

5. The web-based personal contact information system of claim 4 wherein both the querying signal and the consent/no consent signal follows the TCP/Internet Protocol.

6. The web-based personal contact information system of claim 3 further comprising:

the personal contact information database containing an e-mail address of the listing party;

the personal contact information signal sent to the querying party containing the e-mail address of the listing party pursuant to the instruction of the consent/no consent signal generated by the listing party.

7. The web-based personal contact information system of claim 3 further comprising:

the personal contact information database containing a telephone number of the listing party;

the personal contact information signal sent to the querying party containing the
5 telephone number of the listing party pursuant to the instruction of the consent/no
consent signal generated by they listing party.

8. The web-based personal contact information system of claim 3 further comprising:

10 the personal contact information database containing a street address of the listing
party;

the personal contact information signal sent to the querying party containing the
street address of the listing party pursuant to the instruction of the consent/no consent signal
15 generated by they listing party.

9. The web-based personal contact information system of claim 3 further comprising:

the personal contact information database containing a fax number of the listing
20 party;

the personal contact information signal sent to the querying party containing the fax
number of the listing party pursuant to the instruction of the consent/no consent signal
generated by they listing party.

25

10. The web-based personal contact information system of claim 3 further comprising:

the personal contact information database containing a pager number of the listing party;

5

the personal contact information signal sent to the querying party containing the pager number of the listing party pursuant to the instruction of the consent/no consent signal generated by the listing party.

10

11. The web-based personal contact information system of claim 3 further comprising:

the personal contact information database containing a time and place that the listing party will be available;

15

the personal contact information signal sent to the querying party containing the time and place that the listing party will be available pursuant to the instruction of the consent/no consent signal generated by the listing party.

20 12. The web-based personal contact information system of claim 3 wherein the querying signal received by the bridge web site server is generated by the querying party using a querying party's computer.

13. The web-based personal contact information system of claim 3 further comprising:

25

the bridge web site server capable of generating a bridge web site that may be accessed by the querying party;

the querying signal received by the bridge web site server being generated by the querying
5 party using a querying party's computer equipped with a web browser and modem for
accessing the bridge web site; said modem of the querying party's computer comprising of
any device that allows one computer to communicate with a remote computer.

14. The web-based personal contact information system of claim 3 further
10 comprising:

the bridge web site server capable of generating a bridge web site that may be
accessed by the listing party;

15 the consent/no consent signal received by the bridge web site server being generated
by the listing party using a listing party's computer having a web browser and modem
for accessing the bridge web site; said modem of the listing party's comprising of any
device that allows one computer to communicate with a remote computer.

20 15. The web-based personal contact information system of claim 3 further
comprising:

the bridge web site server capable of generating a bridge web site that may be accessed by t
the querying party;

25

the querying signal received by the bridge web site server being generated by the querying party using a querying party's computer having a web browser and modem for accessing the bridge web site; said modem of the querying party's computer comprising of any device that allows one computer to communicate with a remote computer;

5

the consent/no consent signal received by the bridge web site server being generated by the listing party using a listing party's computer having a web browser and modem for accessing the bridge web site; said modem of the listing party's comprising of any device that allows one computer to communicate with a remote computer.

10

16. The web-based personal contact information system of claim 3 further comprising:

the bridge web site server capable of generating a bridge web site that may be accessed by
15 the querying party;

the querying signal received by the bridge web site server being generated by the querying party using a querying party's computer having a web browser and modem for accessing the bridge web site; said modem of the querying party's computer comprising of any device
20 that allows one computer to communicate with a remote computer;

the consent/no consent signal received by the bridge web site server being generated by the listing party using a listing party's computer having a web browser and modem for accessing the bridge web site; said modem of the listing party's comprising of any device
25 that allows one computer to communicate with a remote computer;

said querying signal, consent/no consent signal, personal contact information signal and query notification signal following the TCP/Internet Protocol.

5 17. The web-based personal contact information system of claim 3 wherein the registration facility of the bridge web site server stores a name of the querying party and transmits it as a part of the query notification signal to the listing party.

18. The web-based personal contact information system of claim 3 wherein the
10 registration facility of the bridge web site server stores an e-mail address of the querying party and transmits it as a part of the query notification signal to the listing party.

19. The web-based personal contact information system of claim 3 wherein the
15 registration facility of the bridge web site server stores a responses to a questionnaire by the querying party and transmits it as a part of the query notification signal to the listing party.

20. The web-based personal contact information system of claim 3 wherein the
20 registration facility of the bridge web site server stores information from the group consisting of e-mail address, school(s) attended, credit card number, social security number, telephone number or residence of the querying party and transmits it as a part of the query notification signal to the listing party.

21. The web-based personal contact information system of claim 3 further wherein the query notification signal is sent to a listing party's computer as a signal from the group consisting of e-mail, e-mail with a voice attachment, or a real time Internet telephone call message.

5

22. The web-based personal contact information system of claim 3 further comprising:

a database questionnaire signal that is sent to the listing party which prompts the
10 listing party to generate a personal information storage signal that indicates the particular information the listing party would like to make available by the bridge web site server and stored in the personal contact information directory database; said personal information storage signal comprising personal information sent to and received by the bridge web site server.

15

23. The web-based personal contact information system of claim 3 further comprising:

the bridge web site server capable of generating a bridge web site that may be accessed by
20 the querying party and the listing party;

a database questionnaire signal that is sent to the listing party which prompts the listing party to generate a personal information storage signal that indicates the particular information the listing party would like to make available by the bridge web site server and stored in the

personal contact information directory database; said personal information storage signal being received by the bridge web site server.

24. The web-based personal contact information system of claim 3 further
5 comprising: the bridge web site server capable of generating a bridge web site that may be accessed by the querying party and the listing party;

a database questionnaire signal that is sent to the listing party which prompts the listing party to generate a personal information storage signal that indicates the particular information the
10 listing party would like to make available by the bridge web site server and stored in the personal contact information directory database; said personal information storage signal being received by the bridge web site server.

the personal information storage signal containing information from among the group
15 consisting of the e-mail address of the listing party, the telephone number of the listing party, the fax number of the listing party, the pager number of the listing party, or the street address of the listing party.

20 25 . The web-based personal contact information system of claim 3 further comprising:

a database questionnaire signal that is sent to the listing party; said database questionnaire signal comprising one or more signals sent in any sequence or simultaneously that embodies
25 a request for the personal contact information of the listing party that the listing party would

like to have stored in the personal contact information directory, regardless as to whether the database questionnaire signal is modified or altered along its path to the listing party;

a personal information storage signal that indicates the particular information the listing party
5 would like to have stored in the personal contact information directory database; said
personal information storage signal comprising one or more signals sent in any sequence or
simultaneously from the listing party to the bridge web site server that embodies personal
contact information that the listing party would like to have stored in the personal contact
information directory of the bridge web site server, regardless as to whether the personal
10 information storage signal is modified or altered along its path from the listing party to the
bridge web site server.

26 . The web-based personal contact information system of claim 3 further
comprising:

15

the bridge web site server capable of generating a bridge web site that may be accessed by the
querying party and the listing party;

a database questionnaire signal that is sent to the listing party; said database questionnaire
20 signal comprising one or more signals sent in any sequence or simultaneously that embodies
a request for the personal contact information of the listing party that the listing party would
like to have stored in the personal contact information directory, regardless as to whether the
database questionnaire signal is modified or altered along its path to the listing party;

a personal information storage signal that indicates the particular information the listing party would like to have stored in the personal contact information directory database; said personal information storage signal comprising one or more signals sent in any sequence or simultaneously from the listing party to the bridge web site server that embodies personal
5 contact information that the listing party would like to have stored in the personal contact information directory of the bridge web site server, regardless as to whether the personal information storage signal is modified or altered along its path from the listing party to the bridge web site server;

10 the querying signal received by the bridge web site server being generated by the querying party using a querying party's computer having a web browser and modem for accessing the bridge web site; said modem of the querying party's computer comprising of any device that allows one computer to communicate with a remote computer;

15 the consent/no consent signal received by the bridge web site server being generated by the listing party using a listing party's computer having a web browser and modem for accessing the bridge web site; said modem of the listing party's comprising of any device that allows one computer to communicate with a remote computer.

20 27. The web-based personal contact information system of claim 3 further comprising:

the bridge web site server capable of generating a bridge web site that may be accessed by the querying party and the listing party;

a database questionnaire signal that is sent to the listing party; said database questionnaire signal comprising one or more signals sent in any sequence or simultaneously that embodies a request for the personal contact information of the listing party that the listing party would like to have stored in the personal contact information directory, regardless as to whether the
5 database questionnaire signal is modified or altered along its path to the listing party;

a personal information storage signal that indicates the particular information the listing party would like to have stored in the personal contact information directory database; said personal information storage signal comprising one or more signals sent in any sequence or
10 simultaneously from the listing party to the bridge web site server that embodies personal contact information that the listing party would like to have stored in the personal contact information directory of the bridge web site server, regardless as to whether the personal information storage signal is modified or altered along its path from the listing party to the bridge web site server;

15

the personal information storage signal containing information from among the group consisting of the e-mail address of the listing party, the telephone number of the listing party, the fax number of the listing party, the pager number of the listing party, or the street address of the listing party.

20

the querying signal received by the bridge web site server being generated by the querying party using a querying party's computer having a web browser and modem for accessing the bridge web site; said modem of the querying party's computer comprising of any device that allows one computer to communicate with a remote computer;

25

the consent/no consent signal received by the bridge web site server being generated by the listing party using a listing party's computer having a web browser and modem for accessing the bridge web site; said modem of the listing party's comprising of any device that allows one computer to communicate with a remote computer;

5

the query notification signal sent to a listing party's computer as a signal from the group consisting of e-mail, e-mail with a voice attachment, or a real time Internet telephone call message.

10 28. The web-based personal contact information system of claim 3 wherein the personal contact information signal conforms to the TCP/IP protocol.

29. The web-based personal contact information system of claim 3 wherein the personal contact information is received by a telephonic peripheral of the querying party.

15

30. The web-based personal contact information system of claim 3 wherein the personal contact information contained in the personal contact information signal is in the form of telephone call to a pager with a screen display.

20 31. The web-based personal contact information system of claim 3 wherein the personal contact information contained in the personal contact information signal is in the form a voice telephone call.

32. The web-based personal contact information system of claim 3 wherein the personal contact information contained in the personal contact information signal is in the form an analog voice telephone call.

5

33. The web-based personal contact information system of claim 3 wherein the personal contact information signal is sent to a telephonic peripheral of the querying party.

34. The web-based personal contact information system of claim 3 wherein the personal
10 contact information contained in the query notification signal is in the form of an analog telephone call to a pager with a screen display to the querying party.

35. The web-based personal contact information system of claim 3 wherein the personal contact information contained in the personal contact information signal sent to the querying
15 party is in the form of a voice telephone call.

36. The web-based personal contact information system of claim 3 wherein the query notification signal is sent to a listing party's telephonic peripheral.

20 37. The web-based personal contact information system of claim 3 wherein the query notification signal is sent to a listing party's pager.

38. The web-based personal contact information system of claim 3 wherein the query notification signal is sent to a telephone with a screen display.

25

39. The web-based personal contact information system of claim 3 wherein the query notification signal is sent to a listing party's analog telephone.

40. The web-based personal contact information system of claim 3 wherein the query
5 notification signal is sent to a listing party's cellular or digital telephone.

41. The web-based personal contact information system of claim 3 wherein the query notification signal is sent to a listing party's telephonic peripheral and the consent/no consent signal is sent from the listing party's telephonic peripheral.

10

42. The web-based personal contact information system of claim 3 wherein the query notification signal is sent to a listing party's voice telephone and the consent/no consent signal is sent from the listing party's voice telephone.

15 43. The web-based personal contact information system of claim 3 wherein the query notification signal is sent to a listing party's analog voice telephone and the consent/no consent signal is sent from the listing party's analog voice telephone.

44. The web-based personal contact information system of claim 3 wherein the query
20 notification signal is sent to a listing party's telephone with a screen display and the consent/no consent signal is sent from the listing party's telephone with a screen display.

45. A web-based personal contact information system comprising:

a bridge web site server located on the Internet; said bridge web site server comprising any computer, sub-component of a computer, or group of computers, or any combination thereof, that possesses the capacity of maintaining a client/server environment on the Internet;

5

said bridge web site server having a personal contact information directory database that is capable of storing personal contact information of a listing party;

said bridge web site server receiving a parameter requirements signal generated by the listing party that is sent to the bridge web site server; said parameter requirements signal comprising one or more signals sent in any sequence or simultaneously to the bridge web site server that embodies established parameters wherein certain, if any, personal contact information contained in the personal contact information directory database of a bridge web site server will be sent to a querying party, regardless as to whether the parameter requirements signal is modified or altered along its path from the listing party to the bridge web site server;

said bridge web site server receiving a request for information signal comprising one or more signals sent in any sequence or simultaneously from the querying party that embodies a request for the personal contact information of the listing party, regardless as to whether the querying signal is modified or altered along its path from the querying party to the bridge web site server;

said bridge web site server generating a questionnaire signal for the querying party that is sent to the querying party; said questionnaire signal for the query party comprising one or more signals sent in any sequence or simultaneously sent from the bridge web site

server that embodies a questionnaire for the querying, regardless as to whether the questionnaire signal for the querying party is modified or altered along its path from the bridge web site server to the querying party;

5 said bridge web site server receiving a questionnaire response signal from the querying party; said questionnaire response signal from the query party comprising one or more signals sent in any sequence or simultaneously sent to the bridge web site server from the querying party that embodies a response to the questionnaire by the querying party, regardless as to whether the questionnaire response signal from the querying party is
10 modified or altered along its path from the querying party to the bridge web site server.

46. The web-based personal contact information system of claim 45 further comprising:

15 said bridge web site sever generating a personal contact information signal; said personal contact information signal sent to the querying party; said personal contact information signal containing the personal contact information of the listing party that was directed to be sent to the querying party according to dictates of the parameter requirements signal generated by the listing party and the response to the questionnaire embodied in the questionnaire response signal from the query party; said personal contact information
20 signal comprising one or more signals sent in any sequence or simultaneously to the querying party that embodies the personal contact information that is to be sent to the querying party, regardless as to whether the personal contact information signal is modified or altered along its path from the bridge web site server to the listing party.

25 47. The web-based personal contact information system of claim 46 further comprising:

said personal contact information signal containing information from among the group consisting of the e-mail address of the listing party, the telephone number of the listing party, the fax number of the listing party, the pager number of the listing party, or the street address of the listing party.

5

48. The web-based personal contact information system of claim 45 further comprising:

said parameter requirements signal being generated by a listing party's computer;

10 said questionnaire signal for the querying party being received by a querying party's computer;

said query signal and said questionnaire response signal from the querying party being generated by the querying party's computer.

15

49. The web-based personal contact information system of claim 45 further comprising:

said parameter requirements signal being generated by a listing party's computer having a web browser and modem;

20

said questionnaire signal for the querying party being received by a querying party's computer having a web browser and modem; said modem of the querying party's computer comprising of any device that allows one computer to communicate with a remote computer.

25

said query signal and said questionnaire response signal from the querying party being generated by the querying party's computer having a web and modem.

5 50. The web-based personal contact information system of claim 45 further comprising:

a database questionnaire signal that is sent to the listing party; said database questionnaire signal comprising one or more signals sent in any sequence or simultaneously that embodies a request for the personal contact information of the listing party that the listing party would like to have stored in the personal contact information directory, regardless as to whether the database questionnaire signal is modified or altered along its path from the bridge web site server to the listing party.

15 51. The web-based personal contact information system of claim 46 further comprising:

the bridge web site server capable of generating a bridge web site that may be accessed by the querying party and the listing party;

20 a database questionnaire signal that is sent to the listing party; said database questionnaire signal comprising one or more signals sent in any sequence or simultaneously that embodies a request for the personal contact information of the listing party that the listing party would like to have stored in the personal contact information directory, regardless as to whether the database questionnaire signal is modified or altered along its path to the listing party;

25

a personal information storage signal that indicates the particular information the listing party would like to have stored in the personal contact information directory database; said personal information storage signal comprising one or more signals sent in any
5 sequence or simultaneously from the listing party to the bridge web site server that embodies personal contact information that the listing party would like to have stored in the personal contact information directory of the bridge web site server, regardless as to whether the personal information storage signal is modified or altered along its path from the listing party to the bridge web site server;

10

the request for information signal and the questionnaire response from the query party received by the bridge web site server being generated by the querying party using a querying party's computer.

15

the querying party's computer having a web browser and modem for accessing the bridge web site; said modem of the querying party's computer comprising of any device that allows one computer to communicate with a remote computer;

20

said parameter requirements signal and personal information storage signal generated by the listing party's computer; said listing party's computer having a web browser and modem for accessing the bridge web site; said modem of the listing party's comprising of any device that allows one computer to communicate with a remote computer.

52. The web-based personal contact information system of claim 46 further comprising:

said personal contact information signal providing complete disclosure of the listing party's personal contact information, based upon the parameter requirements signal generated by the listing party and the questionnaire response signal generated by the querying party

5

53. The web-based personal contact information system of claim 45 further comprising:

said personal contact information signal providing partial disclosure of the personal contact information, based upon the parameter requirements signal generated by the listing party and the questionnaire response signal generated by the querying party

10

54. The web-based personal contact information system of claim 45 further comprising:

said personal contact information signal denying any disclosure of personal contact information but notifying the querying party that they will contact the querying party directly, based upon the parameter requirements signal generated by the listing party and the questionnaire response signal generated by the querying party

15

55. The web-based personal contact information system of claim 45 further comprising:

20

said personal contact information signal denying any disclosure of personal information and requesting more complete identification information from the querying party by sending another questionnaire signal for the querying party which will prompt the querying party for more information, based upon the parameter requirements signal

generated by the listing party and the questionnaire response signal generated by the querying party

56. The web-based personal contact information system of claim 45 further comprising:

5

said personal contact information signal deny any disclosure but sending a message to the querying party, based upon the parameter requirements signal generated by the listing party and the questionnaire response signal generated by the querying party

10 57. The web-based personal contact information system of claim 45 further comprising:

said personal contact information signal denying any disclosure and not responding in any other way to the querying party by way of an additional message, based upon the parameter requirements signal generated by the listing party and the questionnaire

15 response signal generated by the querying party

58. The web-based personal contact information system of claim 45 wherein the parameter for releasing personal contact information is the name of the querying party.

20 59. The web-based personal contact information system of claim 45 wherein the parameter for releasing personal contact information is a demographic profile of the querying party.

60. The web-based personal contact information system of claim 45 wherein the parameter for releasing personal contact information is the address (be it street address, zip code, or geographical area) of the querying party.

5

61. The web-based personal contact information system of claim 45 wherein the parameter for releasing personal contact information is the educational history of the querying party.

10 62. The web-based personal contact information system of claim 45 wherein the parameter for releasing personal contact information is the present school of the querying party.

15 63. The web-based personal contact information system of claim 45 wherein the parameter for releasing personal contact information is the employment history of the querying party.

20 64. The web-based personal contact information system of claim 45 wherein the parameter for releasing personal contact information is the present employment of the querying party.

65. The web-based personal contact information system of claim 45 wherein the parameter for releasing personal contact information is the club membership of the querying party.

25

66. The web-based personal contact information system of claim 45 wherein the parameter for releasing personal contact information is the interest of the querying party.

5 67. The web-based personal contact information system of claim 45 wherein the parameter for releasing personal contact information is the religion of the querying party.

68. The web-based personal contact information system of claim 45 wherein the parameter for releasing personal contact information is the parish affiliation of the querying party.

10

69. The web-based personal contact information system of claim 45 wherein the parameter for releasing personal contact information is the gender of the querying party

15 70. The web-based personal contact information system of claim 45 wherein the parameter for releasing personal contact information is the family relation of the querying party.

20 71. The web-based personal contact information system of claim 45 wherein the parameter for releasing personal contact information is the password known by the querying party

72. The web-based personal contact information system of claim 45 wherein the parameter for releasing personal contact information is based on a systematic weighing of parameters of the querying party.

25

73. A method of providing personal contact information comprising:

receiving a parameter requirements signal containing information as to what personal
5 contact information should be made available to a querying party based upon a response
to a questionnaire;

receiving a querying signal embodying a request for personal contact information of the
listing party;

10

sending a questionnaire signal to the querying party asking for information regarding the
querying party;

receiving a questionnaire response signal from the querying party providing answers to
15 the questionnaire;

sending a personal contact information signal to a querying party based upon the received
questionnaire response signal containing responses to a questionnaire and the parameter
requirements established in the parameter requirement signal.

20

74. The method of claim 73 wherein the parameter requirements signal, the querying
signal, the questionnaire signal to the querying party, the questionnaire response signal
from the querying party, and the personal contact information signal to the querying party
are all sent over the Internet.

25

75. A method of proving personal contact information comprising:

receiving a querying signal generated over the Internet by a querying party; said querying
signal comprising one or more signals sent in any sequence or simultaneously from the
5 querying party that embodies both a request for the personal contact information of a
listing party and also embodies a communication of identifying information about the
querying party;

generating a query notification signal over the Internet that notifies the listing party that
10 there has been a query for the personal information of the listing party; said query
notification signal notifying the listing party of the communication of identifying
information of the listing party; said query notification signal comprising one or more
signals sent in any sequence or simultaneously to the listing party that embodies both a
request for the personal contact information of the listing party and also embodies a
15 communication of identifying information about the querying party.

76. The method of claim 75 further comprising:

receiving a consent/no consent signal over the Internet from the listing party; said
20 consent/no consent signal directing what, if any, personal contact information is to be sent
to the querying party; said consent/no consent signal comprising one or more signals sent
in any sequence or simultaneously from the listing party that embodies an instruction as
to what personal information, if any, is to be sent to the querying party.

25 77. The method of claim 76 further comprising:

generating a personal contact information signal over the Internet to the querying party;
said personal contact information signal containing the personal contact information of
the listing party that was directed to be sent to the querying party according to dictates of
5 the consent/no consent signal generated by the listing party; said personal contact
information signal comprising one or more signals sent in any sequence or simultaneously
to the querying party that embodies the personal information that is to be sent to the
querying party.

10 78. The method of claim 77 further comprising the step of generating a bridge web site
that may be accessed by the querying party.

79. The method of claim 78 wherein both the querying signal and the consent/no consent
signal follows the TCP/Internet Protocol.

15

80. The method of claim 77 further comprising:

the personal contact information database containing an e-mail address of the listing
party; the personal contact information signal containing the e-mail address of the
20 listing party pursuant to the instruction of the consent/no consent signal generated by
the listing party.

81. The method of claim 77 further comprising:

the personal contact information database containing a telephone number of the listing party; the personal contact information signal containing the telephone number of the listing party pursuant to the instruction of the consent/no consent signal generated by they listing party.

5

82. The method of claim 77 further comprising:

the personal contact information database containing a street address of the listing party; the personal contact information signal containing the street address of the listing party pursuant to the instruction of the consent/no consent signal generated by they listing party.

10

83. The method of claim 77 further comprising:

the personal contact information database containing a fax number of the listing party; the personal contact information signal containing the fax number of the listing party pursuant to the instruction of the consent/no consent signal generated by they listing party.

15

20 84. The method of claim 77 further comprising:

the personal contact information database containing a pager number of the listing party; the personal contact information signal containing the pager number of the listing party pursuant to the instruction of the consent/no consent signal generated by they listing party.

25

85. The method of claim 77 further comprising:

5 the personal contact information database containing a time and place that the listing party will be available; the personal contact information signal the time and place that the listing party will be available pursuant to the instruction of the consent/no consent signal generated by they listing party.

10 86. The method of claim 77 wherein the querying signal is generated by the querying party using a querying party's computer.

87. The method of claim 77 further comprising the step of generating a bridge web site that may be accessed by the querying party, wherein the querying signal is generated by
15 the querying party using a querying party's computer having a web browser and modem; said modem of the querying party's computer comprising of any device that allows one computer to communicate with a remote computer.

88. The method of claim 77 further comprising the step of generating a bridge web site that
20 may be accessed by the listing party, wherein the consent/no consent signal is generated by the listing party using a listing party's computer having a web browser and modem; said modem of the listing party's comprising of any device that allows one computer to communicate with a remote computer.

89. The method of claim 77 further comprising the step of generating a bridge web site that may be accessed by the querying party; wherein:

the querying signal is generated by the querying party using a querying party's computer
5 having a web browser and modem; said modem of the querying party's computer comprising of any device that allows one computer to communicate with a remote computer;

the consent/no consent signal is generated by the listing party using a listing party's computer having a web browser and modem; said modem of the listing party's comprising of any
10 device that allows one computer to communicate with a remote computer.

90. The method of claim 77 further comprising the step of generating a bridge web site that may be accessed by the querying party wherein:

15 the querying signal is generated by the querying party using a querying party's computer having a web browser and modem; said modem of the querying party's computer comprising of any device that allows one computer to communicate with a remote computer;

the consent/no consent signal is generated by the listing party using a listing party's
20 computer having a web browser and modem; said modem of the listing party's comprising of any device that allows one computer to communicate with a remote computer;

said querying signal, consent/no consent signal, personal contact information signal and query notification signal following the TCP/Internet Protocol.

91. The method of claim 77 further comprising the step of storing a name of the querying party and transmitting it as a part of the query notification signal to the listing party.

92. The method of claim 77 further comprising the step storing an e-mail address of the
5 querying party and transmitting it as a part of the query notification signal to the listing party.

93. The method of claim 77 further comprising the step of storing a responses to a questionnaire by the querying party and transmitting it as a part of the query notification signal to the listing party.

10

94. The method of claim 77 further comprising the step of storing information from the group consisting of e-mail address, school(s) attended, credit card number, social security number, telephone number or residence of the querying party and transmits it as a part of the query notification signal to the listing party.

15

95. The method of claim 77 wherein the query notification signal is sent to a listing party's computer as a signal from the group consisting of e-mail, e-mail with a voice attachment, or a real time Internet telephone call message.

20 96. The method of claim 77 further comprising:

generating a database questionnaire signal that is sent over the Internet to the listing party which prompts the listing party to generate a personal information storage signal that indicates the particular information the listing party would like to make available.

25

97. The method of claim 77 further comprising the steps of:

generating a bridge web site that may be accessed by the querying party and the listing party;

5 generating a database questionnaire signal that is sent over the Internet to the listing party which prompts the listing party to generate a personal information storage signal that is sent over the Internet and that indicates the particular information the listing party would like to make available to the querying party.

10 98. The method of claim 77 further comprising the steps of:

generating a bridge web site that may be accessed by the querying party and the listing party;

generating a database questionnaire signal that is sent over the Internet to the listing party
15 which prompts the listing party to generate a personal information storage signal over the Internet that indicates the particular information the listing party would like to make available to the querying party; wherein:

the personal information storage signal containing information from among the group
20 consisting of the e-mail address of the listing party, the telephone number of the listing party, the fax number of the listing party, the pager number of the listing party, or the street address of the listing party.

99 . The method of claim 77 further comprising:

25

generating a database questionnaire signal over the Internet that is sent to the listing party;
said database questionnaire signal comprising one or more signals sent in any sequence or
simultaneously that embodies a request for the personal contact information of the listing
party;

5

receiving a personal information storage signal over the Internet that indicates the particular
information the listing party would like to have stored; said personal information storage
signal comprising one or more signals sent in any sequence or simultaneously from the listing
party that embodies personal contact information that the listing party would like to have
10 stored.

100 . The method of claim 77 further comprising the steps of:

15 generating a bridge web site that may be accessed by the querying party and the listing party;

generating a database questionnaire signal over the Internet that is sent to the listing party;
said database questionnaire signal comprising one or more signals sent in any sequence or
simultaneously that embodies a request for the personal contact information of the listing
20 party that the listing party would like to have stored;

receiving a personal information storage signal over the Internet that indicates the particular
information the listing party would like to have stored; said personal information storage
signal comprising one or more signals sent in any sequence or simultaneously from the listing

party that embodies personal contact information that the listing party would like to have stored; wherein:

the querying signal is generated by the querying party using a querying party's computer
5 having a web browser and modem; said modem of the querying party's computer comprising of any device that allows one computer to communicate with a remote computer;

the consent/no consent signal is generated by the listing party using a listing party's
10 computer having a web browser and modem; said modem of the listing party's comprising of any device that allows one computer to communicate with a remote computer.

15 101. The method of claim 77 further comprising:

generating a bridge web site that may be accessed by the querying party and the listing party;

generating a database questionnaire signal that is sent to the listing party over the Internet;
said database questionnaire signal comprising one or more signals sent in any sequence or
20 simultaneously that embodies a request for the personal contact information of the listing party that the listing party would like to have stored;

receiving a personal information storage signal that indicates the particular information the listing party would like to have; said personal information storage signal comprising one or

more signals sent in any sequence or simultaneously from the listing party that embodies personal contact information that the listing party would like to have stored; wherein:

the personal information storage signal containing information is comprised from among the
5 group consisting of the e-mail address of the listing party, the telephone number of the listing party, the fax number of the listing party, the pager number of the listing party, or the street address of the listing party;

the querying signal is generated by the querying party using a querying party's
10 computer having a web browser and modem; said modem of the querying party's computer comprising of any device that allows one computer to communicate with a remote computer;

the consent/no consent signal is generated by the listing party using a listing party's computer having a web browser and modem; said modem of the listing party's comprising of
15 any device that allows one computer to communicate with a remote computer;

the query notification signal sent to a listing party's computer as a signal from the group consisting of e-mail, e-mail with a voice attachment, or a real time Internet telephone call message.

20

102. The method of claim 77 wherein the personal contact information signal conforms to the TCP/IP protocol.

103. The method of claim 77 wherein the personal contact information is received by a telephonic peripheral of the querying party.

104. The method of claim 77 wherein the personal contact information contained in the
5 personal contact information signal is in the form of telephone call to a pager with a screen display.

105. The method of claim 77 wherein the personal contact information contained in the personal contact information signal is in the form a voice telephone call.

10

106. The method of claim 77 wherein the personal contact information contained in the personal contact information signal is in the form an analog voice telephone call.

15 107. The method of claim 77 wherein the personal contact information signal is sent to a telephonic peripheral of the querying party.

108. The method of claim 77 wherein the personal contact information contained in the query notification signal is in the form of an analog telephone call to a pager with a screen
20 display to the querying party.

109. The method of claim 77 wherein the personal contact information contained in the personal contact information signal sent to the querying party is in the form a voice telephone call.

25

110. The method of claim 77 wherein the query notification signal is sent to a listing party's telephonic peripheral.

111. The method of claim 77 wherein the query notification signal is sent to a listing
5 party's pager.

112. The method of claim 77 wherein the query notification signal is sent to a telephone with a screen display.

10 113. The method of claim 77 wherein the query notification signal is sent to a listing party's analog telephone.

114. The method of claim 77 wherein the query notification signal is sent to a listing party's cellular or digital telephone.

15

115. The method of claim 77 wherein the query notification signal is sent to a listing party's telephonic peripheral and the consent/no consent signal is sent from the listing party's telephonic peripheral.

20 116. The method of claim 77 wherein the query notification signal is sent to a listing party's voice telephone and the consent/no consent signal is sent from the listing party's voice telephone.

117. The method of claim 77 wherein the query notification signal is sent to a listing party's analog voice telephone and the consent/no consent signal is sent from the listing party's analog voice telephone.

5 118. The method of claim 77 wherein the query notification signal is sent to a listing party's telephone with a screen display and the consent/no consent signal is sent from the listing party's telephone with a screen display.

119.A method of screening personal contact information comprising:

10

receiving a querying signal embodying a request for personal contact information of a listing party;

receiving a consent/no consent signal establishing what personal contact information will be
15 made available to a querying party.

120.The method of claim 119 further comprising:

generating a query notification signal that is sent to a listing party which notifies the
20 listing party of the existence of a query for personal contact information of the listing party and which provides identifying information about the querying party;

generating a personal contact information signal that is sent to a querying party that provides the personal contact information that the listing party desired to make available
25 to the querying party.

121.The method of claim 120 further comprising the step of generating a bridge web site.

122.The method of claim 120 further comprising the steps of generating a database
5 questionnaire signal and receiving a personal information storage signal.

123.The method of claim 119 wherein both the stops of receiving a querying signal
embodying a request for personal contact information of a listing party and receiving
a consent/no consent signal establishing what personal contact information will be
10 made available to a querying party are *not* performed over the Internet.

124.The method of claim 119 wherein both the stops of receiving a querying signal
embodying a request for personal contact information of a listing party and receiving
a consent/no consent signal establishing what personal contact information will be
15 made available to a querying party *are* performed over the Internet.

125.The method of claim 120 wherein both the stops of receiving a querying signal
embodying a request for personal contact information of a listing party and receiving
a consent/no consent signal establishing what personal contact information will be
20 made available to a querying party are *not* performed over the Internet; and wherein
both the steps of generating a query notification signal that is sent to a listing party
which notifies the listing party of the existence of a query for personal contact
information of the listing party and which provides identifying information about the
querying party are *not* performed over the Internet.

25

126. The method of claim 120 wherein both the steps of receiving a querying signal embodying a request for personal contact information of a listing party and receiving a consent/no consent signal establishing what personal contact information will be made available to a querying party *are* performed over the Internet; and wherein both
5 the steps of generating a query notification signal that is sent to a listing party which notifies the listing party of the existence of a query for personal contact information of the listing party and which provides identifying information about the querying party *are* performed over the Internet.

10 127. The method of claim 122 wherein both the steps of receiving a querying signal embodying a request for personal contact information of a listing party and receiving a consent/no consent signal establishing what personal contact information will be made available to a querying party *are not* performed over the Internet; and wherein
15 both the steps of generating a query notification signal that is sent to a listing party which notifies the listing party of the existence of a query for personal contact information of the listing party and which provides identifying information about the querying party *are not* performed over the Internet; and wherein the steps of generating a database questionnaire signal and receiving a personal information storage signal *are not* performed over the Internet.

20 128. The method of claim 122 wherein both the steps of receiving a querying signal embodying a request for personal contact information of a listing party and receiving a consent/no consent signal establishing what personal contact information will be made available to a querying party *are* performed over the Internet; and wherein both
25 the steps of generating a query notification signal that is sent to a listing party which

notifies the listing party of the existence of a query for personal contact information of the listing party and which provides identifying information about the querying party *are* performed over the Internet; and wherein the steps of generating a database questionnaire signal and receiving a personal information storage signal *are* performed over the Internet.

129.A web-based personal contact information system comprising:

a bridge web site server having a personal contact information database; said
bridge web site server comprising any computer, sub-component of a computer, or
group of computers, or any combination thereof, that possesses the capacity of
maintaining a client/server environment on the Internet;

means for screening which personal contact information will be received by a
querying party by establishing questionnaire parameters.

130.A web-based personal contact information system comprising:

a bridge web site server having a personal contact information database; said
bridge web site server comprising any computer, sub-component of a computer, or
group of computers, or any combination thereof, that possesses the capacity of
maintaining a client/server environment on the Internet;

means for screening which personal contact information will be received by a querying party by having the listing party screen individual queries for personal information.
